## Resume

This document provides an introduction to JERA and a brief explanation of the ecosystem that is being proposed as a mechanism to boost the value of jera and create a community that has a sense of belonging to the token.

Likewise, the distribution of the currency in its early phases is explained, such as the society model that is being presented to future partners of the token ecosystem, recognizing that the project that is being proposed is not something easily achievable without the correct investment and the knowledge of possible risks when putting the token and its ecosystem into action in development.

We take into account the approach of future developments as part of the ecosystem by the JERA development team to allow greater acceptance of our token as a means of payment and economic growth for our community.

## Introduction

JERA is specially designed to achieve an ecosystem of payment for services or products for its community, allowing it to make massive use of the token in a decentralized way, thus achieving a positive impact for both the project and its partners.

The members of our community will use our token for different transactions, such as purchases, sales or exchanges of products or services, each of our future projects and partners is planned to give way to the increase in transactions between those who join the ecosystem. as our partners. JERA seeks to have a positive impact using affordable investment as a tool for all types of people, not necessarily only experts in the field of cryptocurrencies or tokens.

The need to make JERA known in different areas of the crypto world is recognized, therefore, the management of different tools such as exchanges, wallets, price trackers and others will be sought, in order to be able to give a better Image about the project and also greater security on more important issues such as the alliance with potential partners or the management of the ecosystem in the future, also allowing the participation of the community in certain decisions in favor of improving as a project and having even greater acceptance.

Part of the representation of the jera rune is productivity and abundance, if you act honestly, you cannot harvest without having planted, we want to plant trust in our community and that the members can have benefits, jera also implies time for the objectives are met and they reach a pleasant term, therefore JERA is a project that recognizes the time it will take to be able to fulfill the creation of a strong ecosystem, which allows the full use of our token as a means of payment, therefore understands that the triumph is in the perseverance that we can offer to allow the development of the ecosystem and an improvement in the value of JERA.

## **Why do we select a token?**

JERA is a token belonging to the decentralized platform of smart contracts SmartChain under the BEP20 standard, in the first instance the use of an ERC20 token was proposed, unfortunately the sending commissions were very high, so a sending of few amounts of JERA would not be profitable for the community, especially for people who do not handle cryptocurrencies and sending commissions very well.

These tokens, which are built on top of the SmartChain, are standard protocols that regulate the issuance of new tokens on the network, which means that all new tokens must meet certain rules and parameters for acceptance. The objective and the need

for this standard, apart from creating a parameter to follow, is to create interoperability between tokens and to encourage improvements in the JERA ecosystem.

Obtaining the total supply of tokens, obtaining the account balance, transfer capacity of the token and the possibility of spending it, are some of the standard functions that must be fulfilled for the incorporation and interaction of new tokens. Although not all tokens meet these characteristics, they can still be compatible and interact with the Smart Chain in some functions, depending on their capabilities.

This token being a digital asset like any other, it can also be traded in a similar way to Bitcoin, Ethereum or any other cryptoactive. Also adding that your transactions can be tracked in the same way as a cryptocurrency.

The deployment of the token is simpler than the launch of a cryptocurrency, which saves time and the fact of belonging to a chain that is quite fast in confirming transactions is an important addition when making transactions with JERA.

Likewise, the multiple wallets and Dapps compatible with smart contracts such as DEX exchanges allow the use of JERA to be faster and more organic in an environment in which dynamism and practicality are important, also with a relatively low fee cost. .

## Mission

Create and organize an ecosystem in which the token can be exchanged for services or products with partial or total payments, creating alliances with different partners or providing services on their own that accept 100% payment in JERA.

For JERA it is extremely important to grow exponentially, this would be achieved by working as a team, so that each of the members of our ecosystem is benefited, thus guaranteeing 100% security for those who support our project, given the importance that is gives JERA members our system becomes totally decentralized and this allows creating a link of ownership, loyalty and active participation for the growth of our ecosystem.

## goals

- 1) Having, over time, a community that provides support to the ecosystem that is being created, which would facilitate the process of adoption by new members, thanks to all current and future associates who have experience in their fields, it is possible. Give usability to the token, so that JERA members can acquire all kinds of goods and services

using our token as a means of payment in our projects, thus enhancing the use of JERA.

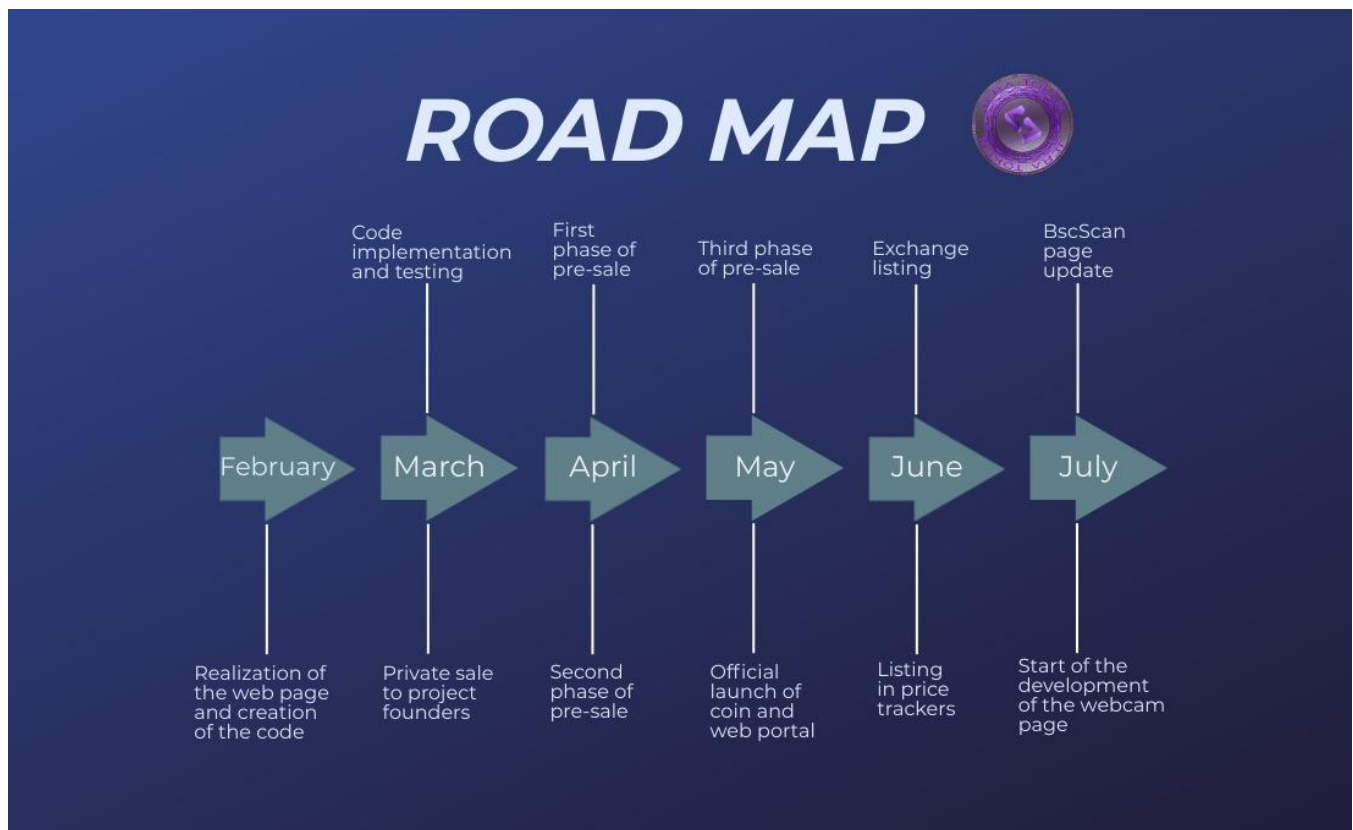

- 2) To be able to create different service options in which JERA is accepted in its entirety as a means of payment, eliminating the use of cash.
- 3) To be recognized as a token with a broad ecosystem for use both in services and in the purchase of products, in which our partners and users feel security and trust when making transactions with JERA.
- 4) A long-term objective is to be able to have an ecosystem of such magnitude, that it is necessary to create a jera market that will function as a marketplace in which the greatest benefit is to obtain discounts or products using mainly JERA, but without neglecting other cryptocurrencies and conventional means of payment.

## Technical information

- Name: JERA
- Ticker: JERA
- Decimals: 18
- Maximum amount: 15,000,000
- Token type: BEP20
- Chain: Binance SmartChain
- BcsScan: <https://bscscan.com/token/0x5dd56af2ac9aac1263155fa8b820bfca27de5d7c>

## Road map

## Token distribution

### Pre-launch token sale

The private sale will be made by offering 3,500,000 tokens, this privately and announced for people in Colombia, at a value of 4,5,6 and 7.5 cents divided into 4 phases of 15 days duration each (two months total).

The token will have a value of 10 cents on the dollar when it is listed on the first exchange, 600,000 tokens will be offered in the first phase called the founders phase, the tokens that are not sold in these phases will be offered on exchanges and in some of the premises of our partners, slowly to avoid an oversupply on the market.

### Tokens intended for partners, team and advertising

To attract partners and thank JERA for their support, the delivery of a quantity of tokens is arranged under the no-sale agreement until at least 3 to 9 months have passed (depending on the quantity delivered) after the delivery of tokens, Under this concept, agreements will be created in which the acquired partners have JERA as a means of partial payment with a percentage decided at the partner's convenience, this based on the point that JERA will be listed in different Exchanges, having value in the price followers, It should be clarified that the search for new partners or commercial agreements to increase the JERA ecosystem is being continued and will continue, each new partner will be integrated into the JERA website and social networks sharing important information about it,percentage of JERA accepted as a means of payment and address in which the coins of the agreement will be delivered.

Likewise, after exhausting the tokens destined for the partners, new strategies will be created that are attractive and beneficial for the new partners who seek to be part of the project.

Taking into account that the JERA code is configured to have a maximum of 15 million and these have already been generated in their entirety, the distribution of coins was proposed as follows:

- 12 million will be available for sale (includes pre-sale coins).
- 2.8 million are out of circulation and will only enter circulation, to pay both partners and listed in exchanges that have as one of their requirements part of the payment in value of the token, the following address in the Smartchain is the one that will have the amount destined : 0x977332f0a5E4782241133138d3Bc2de1d7EE77c9.
- The remaining 200 thousand coins will be used both as recognition to team members (1000 coins per member) and advertising payments if required, these coins can be tracked through the following address: 0x5A25A4ab82F5550531723930A30E68CA2c56F012.

## Future plans

We recognize that creating an ecosystem of the expected level for JERA is not something that is done in a short time, therefore, we have planned in the future the implementation of our own projects that allow the use of jera as a total or partial payment for products that can be used by the community.

Among some projects proposed for future developments within the JERA ecosystem by each member of the desing team, they have:

- Development of a webcam page that allows the purchase of tokens within the page with a value of 100% in the payment via JERA.
- Creation of a small advertising company that allows a percentage payment using JERA.
- In the somewhat distant future due to the limitations that present themselves at the moment to be able to create a Marketplace in which products of varied use can be offered, despite the fact that this proposal is somewhat distant, alternatives will be sought to have pilot plans that allow the use of JERA to purchase products using JERA in its entirety.

## Risks

It is acknowledged and accepted that there are numerous risks associated with exchanging JERA, holding, and using the token.

### Regulations and actions of uncertain application

The regulatory status of JERA and distributed technology is unclear or unstable in many jurisdictions. It is impossible to predict how, when or if regulatory agencies can enforce existing regulations or create new regulations regarding that technology and its applications. Regulatory actions could negatively affect JERA in a number of ways. At the urging of a wide range of legal advisers and ongoing analysis of the development and legal structure of virtual currencies and their ecosystems.

Therefore, for crowd trading, the JERA will be able to constantly adjust the exchange strategy in order to avoid the relevant legal risks as much as possible.

## Competitors

It is possible that tokens are developed that could establish or use the same or similar JERA strategy and try to create similar facilities, these could affect JERA and its ecosystem in the market.

## Loss of Talent

The development of the JERA ecosystem depends on the continued cooperation of the teams that make up its ecosystem, who are highly trained in their respective sectors. The loss of any member may adversely affect JERA or its development in future plans.

## Development failure

There is a risk that the development of planned parts of the JERA ecosystem will not go as planned, for a variety of reasons, including, without limitation, the event of a decline in the prices of any digital asset, unforeseen technical difficulties or the shortage of funds for the development of activities.

## Security flaws

Hackers or other malicious groups or organizations may attempt to interfere with JERA and its related projects in a variety of ways, including, but not limited to, consensus-based attacks, or spoofing. Furthermore, there is a risk that a third party or a member of the project or its affiliates may intentionally or unintentionally introduce the weaknesses into JERA's core infrastructure, which could negatively affect the currency.

## Other risks

In addition to the aforementioned risks, there are other risks associated with the possession, possession and use of the JERA. Such risks may also materialize as unforeseen variations or combinations of the aforementioned risks. Full due diligence must be performed on the project, its affiliates, and the JERA team, as well as understanding the overall framework and vision for prior to the JERA exchange.

## Disclaimer

This document is a descriptive concept of the project, but does not constitute a sale or investment obligation for JERA or future related projects, securities or other controlled products of our current and future partners.

This document cannot serve as a prospectus or any other form of standardized contract document, nor is it investment advice that constitutes a recommendation or application for securities or any other controlled product in any jurisdiction.

Any information or analysis presented in this document does not constitute investment advice, nor does it make any specific biased recommendation.

You should seek all the suggestions of the necessary professionals:

- 1) We make no representations and warranties regarding the accuracy or completeness of any content described in this document or any other content posted in any other way in connection with the project.
- 2) Without prior conditions, we cannot make any representations and warranties regarding the compliance or reasonableness of any forward-looking or conceptual statements.

3) We will not bear any loss of tokens that arises from ignorance of the management of wallets or exchanges.

## Thanks

JERA wants to thank mainly all the partners that are part of its ecosystem and future partners, for believing and supporting this project and the ecosystem that is being developed, without their work and contributions, the success of JERA cannot be possible.

We also want to thank each person who participated in the founders stage, these first tokens are in fact a reflection of the trust that is had in the project and it is something that motivates us to improve along the way, to be able to meet our goals and support our community that will grow over time, since JERA is not a token created to enrich a single person but to be able to provide an ecosystem that allows each member to find growth and well-being.

Last but not least we want to thank the design and development teams, the support and vision they provided to the project was something we needed, their ideas were that something that helped us get the project on track and focus on what we wanted JERA to do. represent.
